

Class level: Cycle 2		Students aged 6-9 years	
By the end of the lesson, learners will have ...			
Content outcome:	constructed and described different life-cycle stages of animals (egg, larva, pupa, adult OR egg, baby, juvenile, adult).		
Language outcome:	used sequencing language (First, Then, Next, Finally) to describe and order the stages of animal life cycles.		
Thinking (cognitive) outcome:	compared and contrasted different types of life cycles (complete metamorphosis vs. incomplete metamorphosis vs. mammal development).		
Stage Name and Aim	Procedure	Time	Materials
<b>Engagement</b>  Aim: To activate prior knowledge and introduce the topic through visual prediction.	<ul style="list-style-type: none"><li>• Show students images of different animals (butterfly, frog, chicken, cat) without revealing their names.</li><li>• Ask: "Do all animals grow in the same way?" Allow pair discussions in French (L1 = first language).</li><li>• Present word cloud with life-cycle vocabulary (egg, larva, pupa, adult, growth, change).</li><li>• Students predict what today's lesson is about.</li></ul>	10 minutes	<b>Animal images</b> (printed A4 size or projected): butterfly, frog, chicken, and cat - all adult age.  <b>Word cloud</b> document created / printed on A3 (words: egg, larva, pupa, adult, growth, change).

<p><b>Input</b></p> <p>Aim: To introduce sequencing language and model life-cycle stages.</p>	<ul style="list-style-type: none"> <li>• Introduce sequencing language frame to scaffold language: <i>First, Then, Next, Finally</i> (use sequencing language frames and write on board with French translations).</li> <li>• Model butterfly life cycle using the butterfly life-cycle diagram (allow code-switching where students propose answers in French and you repeat using the English terms): "<i>First, the butterfly lays an egg. Then, a caterpillar hatches. Next, it forms a chrysalis. Finally, an adult butterfly emerges.</i>"</li> <li>• Students repeat the sequence chorally using the visual prompts.</li> <li>• Introduce vocabulary using the vocabulary cards: egg, larva (caterpillar), pupa (chrysalis), adult, metamorphosis.</li> <li>• Show frog life-cycle diagram and ask students to identify differences (allow L1 (French) speaking, the language objective is on sequencing, not comparing).</li> </ul>	<p>15 minutes</p>	<p>Large format <b>butterfly life-cycle diagram</b> (must show 4 clear stages: caterpillar / larva – Chrysalis / pupa – adult butterfly).</p> <p>Large format <b>Frog life-cycle diagram</b> (stages: egg – tadpole – froglet – adult frog).</p> <p><b>Sequencing language frame</b>  First, (d’abord, tout d’abord)  Then, (puis, ensuite)  Next, (après, ensuite)  Finally, (enfin, finalement)</p> <p>Large format <b>vocabulary flashcards</b>:  Egg, larva, caterpillar, pupa, chrysalis, adult, metamorphosis.</p>
<p><b>Guided practice</b></p> <p>Aim: To practise ordering life-cycle stages and using sequencing language.</p>	<ul style="list-style-type: none"> <li>• Briefly introduce chicken vocabulary using one set of the chicken life-cycle cards.</li> <li>• Model pronunciation for each word.</li> <li>• Show image – students say the word (quick drill).</li> <li>• Divide class into small groups (3-4 students).</li> <li>• Give each group scrambled life-cycle cards (chicken life cycle – images with key vocabulary labels).</li> <li>• Groups discuss in French to order the cards and describe the sequence in English using the provided sentence frame in English: <i>First, Then, Next, Finally</i>.</li> <li>• Teacher monitors, providing language support and sentence frames if needed.</li> </ul>	<p>15/20 minutes</p>	<p><b>Chicken life cycle cards</b> - one set per group (A5 or A6 size). Each card contains images and key vocabulary labels:</p> <ul style="list-style-type: none"> <li>- an egg with the word ‘egg’</li> <li>- a small chick</li> <li>- image of hatching with ‘chick hatches’,</li> <li>- image of a growing chick with text grows bigger, gets feathers</li> <li>- a hen with words adult hen</li> </ul>

	<ul style="list-style-type: none"> <li>Groups present their sequences to the class – write complete sentences on the board as they go: “<b>First, the hen lays an egg. Then, the chick hatches. Next, the chick grows bigger and gets feathers. Finally, the hen is an adult.</b>”</li> <li>Class discusses: “<b>How is the chicken life cycle different from the butterfly life cycle?</b>” (Allow responses in French, English or any appropriate language for your context).</li> </ul>		<p><b>Word bank cards for optional support / extension:</b> hen, lays, egg, hatches, chick, grows, feathers, adult.</p> <p><b>Sentence frame cards:</b> “First, ____. Then, ____ Next, ____ Finally, _____”</p>
<p><b>Independent application</b></p> <p>Aim: To apply sequencing language independently by creating and describing a self-selected animal cycle.</p>	<ul style="list-style-type: none"> <li>Students choose one animal (cat, dog, fish, or grasshopper).</li> <li>Draw and label 4 stages of their chosen animal's life cycle.</li> <li>Write sentences using <i>First, Then, Next, Finally</i>, to describe each stage.</li> <li>Challenge: Students identify if their animal has complete metamorphosis, incomplete metamorphosis, or direct development.</li> </ul> <p>Extra vocabulary may be needed:</p> <ul style="list-style-type: none"> <li>General - baby, young</li> <li>Cat-specific – kitten, cat</li> <li>Dog-specific – puppy, dog</li> <li>Fish-specific – fry (alevin), fish</li> </ul>	15 minutes	<p>A4 size <b>life-cycle worksheet template</b> (circle divided into 4 equal sections with arrows showing clockwise direction).</p> <p><b>Reference images of animals</b> (optional).</p> <p><b>Word bank poster</b> with key vocabulary.</p> <p><b>Blank A4 paper</b> if you prefer students to create their own diagram</p> <p><b>Drawing materials.</b></p>
<p><b>Comparison and assessment</b></p> <p>Aim: To compare different life cycles and assess understanding.</p>	<ul style="list-style-type: none"> <li>Create a Venn diagram on the board comparing butterfly and chicken life cycles.</li> <li>Students contribute similarities (lay eggs, grow, have stages) and differences (metamorphosis vs. no metamorphosis).</li> </ul>	10 minutes	<p>Large size <b>Venn diagram</b> template (on board or chart paper): 2 overlapping circles – left circle labelled ‘butterfly’ and right circle labelled ‘chicken’ – middle overlapping section labelled ‘both’.</p>

	<ul style="list-style-type: none"><li>Exit ticket: Students complete sentence: "The difference between the life cycle of a butterfly and a chicken is..."</li><li>Share 2-3 student responses.</li></ul>		<b>Exit ticket slips</b> (with sentence prompts).
--	--	--	---

### Main assessment criteria

<b>Content</b>	Can identify and order 4 stages of at least one animal life cycle correctly
<b>Language</b>	Uses at least 3 sequencing words (First, Then, Next, Finally) correctly in oral or written form
<b>Thinking</b>	Can identify at least one similarity and one difference between two types of life cycles

Should you wish to use self-assessment, you can use the following sentences on a PowerPoint for students to do thumbs up / down as evaluation – or use them as a paper slip they can stick in their science books:

- I can order and label the stages of an animal's life cycle.
- I can use *First, Then, Next, and Finally*, to describe life cycle stages.
- I can compare different types of life cycle.
